YardBright

GBT9017 Series
Solar Pillar Light

SETUP AND OPERATING INSTRUCTIONS

Use this guide to charge your light, choose a mounting location, and select your preferred light color, brightness, and operating time with the supplied remote control.

Getting started

1 Charge before first use

Place the fixture outdoors in full sunlight for three days with the light switched OFF to charge the battery.

2 Choose a sunny mounting location

Select a location that receives at least eight hours of full sunlight each day for maximum charging efficiency. Use mounting hardware appropriate for the mounting surface. Hardware is not included because mounting surfaces and installation methods vary.

3 Turn on and select your settings

After the initial charge, press ON on the supplied remote. Choose your preferred color and brightness using the controls below. Once activated, the light turns on automatically at dusk; you do not need to turn it on manually each evening.

Remote control quick reference

Button	Function
ON	Turns the light on and selects 4500K neutral white.
A	Selects 3000K warm white.
B	Selects 6000K cool white.
3H / 5H / 8H	Selects an operating time of 3, 5, or 8 hours.
+ / –	Increases or decreases brightness to your preference.
30% / 50% / 80%	Selects a preset brightness level.
OFF	Turns the light off.

Keep these instructions for future reference.
